Horseman Announces Lens Support System for Micro Four Thirds Cine Lenses

Komamura Corporation, Tokyo, Japan, announced availability of a new lens support system that is in compliant with the Micro Four Thirds standard, the Horseman Lens Support System (For Micro Four Thirds Cine Lenses).

The system consists of the PL Mount Adapter, the Lens Support and the TS-Pro Base Unit. The PL Mount Adapter (for Micro Four Thirds Format) is an adapter for converting the PL mount into the micro four thirds mount. The use of the adapter enables you to mount cine lenses on your cine cameras in the micro four thirds format. The PL Mount Adapter is in compliant with the micro four thirds system standard. The Lens Support is used for supporting heavy cine lenses when it is mounted on 19mm rods. The TS-Pro Base Unit that comes with a pair of 19mm rods provides an ideal base for cine cameras without rods. The Base Unit not only becomes a base for the Lens Support but also enables you to use other accessories like mat boxes. Since the Base Unit is designed to allow camera height adjustment, the system can support small cameras such as DSLR cameras as well.

The Horseman Lens Support System (for Micro Four Thirds Cine Lenses) consisting of the Horseman TS-PRO Base Unit, the PL Mount Adapter and the Lens Support is now available.
